

Instructions for using Sublime Text with TerraME in MAC OS X

02 July 2013

Execute the following steps:

1. Install Sublime Text application from www.sublimetext.com.
2. Copy file "Lua.tmLanguage.xml", available at the TerraME site to
/Library/Application Support/Sublime Text 2/Packages/Lua/
3. Copy file "TerraME.sublime-build.json", available at the TerraME site to
/Library/Application Support/Sublime Text 2/Packages/User/
4. Run Sublime Text and open a TerraME example.
5. In the "Tools/Build System" menu, select "TerraME". Execute the file with
"Tools/Build". You can also use ⌘B. The TerraME Observer windows may be hidden
behind the "SublimeText" windows. Move the "SublimeText" window to see them.
